

# Introducing CURE Foundation Institutes

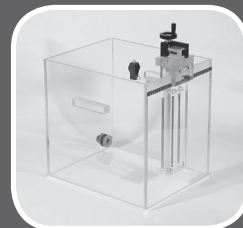

**CURE Institute of Medical Physics** will be happy to discuss with you all your clinical physics needs including, but not limited to:

- Implementing and commissioning new treatment technologies
- Clinical coverage
- Total site management
- Audits: beam data, planning system, QA procedures, planning procedures, etc.
- Equipment selection
- Acceptance testing
- Commissioning
- Beam modeling
- Radiation oncology physics webinars with high educational content
- Training clinical staff, on and off site, during treatment technology implementation
- Research & Development efforts in all aspects of radiation oncology physics and technology
- Routine Calibration & QA
- Assistance in all aspects of accreditation

## CURE Institute of Medical Physics

**CURE Institute of Medical Physics** is part of **CURE Foundation**, a non-profit healthcare organization founded in 2007 by scientist and entrepreneur Krishnan Suthanthiran. CURE Foundation has established several institutes that provide medical physics, health physics, and clinical services.

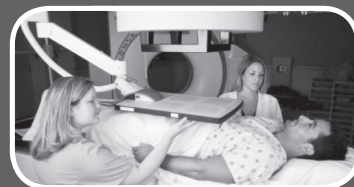

CURE Institute of Medical Physics provides all aspects of clinical physics services, education, training and R&D in radiation therapy and diagnostic radiology. These services are available to both CURE Foundation clinics and other facilities in the US and around the world.

To ensure patient safety and adherence to established quality standards, CURE Institute of Medical Physics works in close collaboration with the entire treatment team from the early stages of planning the facility's technology needs to commissioning, beam modeling and routine quality assurance.

With in-depth expertise ranging from the selection of the right technology for the desired treatment method, to the implementation of the newest treatment protocols, the Institute's ABR-certified physicists will work tirelessly to provide your clinical staff with the necessary peace of mind, and your patients, the highest quality care possible.
