Esophageal Applicator (single tube)

Part # 287-1

Discription: The Esophageal Applicator is a Nasogastric (NG) tube modified to have one additional afterloading tube in one of the lumens. The afterloading tube is closed at one end and enters through a hole made at 60 cm from the bottom of the NG tube and reaches up to the bottom. A small stainless steel ball is kept at the closed end for checking the position of the tube in the radiograph. A stainless steel button is slid onto the afterloading tube nearer to the open end for suturing to skin.

Dummy Sources (Cesium)

Part # 513-1

These are Dummy Tungsten Sources with a length of 20 mm and a diameter of 3 mm to simulate Cesium sources, arranged with 20 mm long spacers in a plastic tube so as to load conveniently in a central tandem. Because of the high density of Tungsten a better Radiograph is obtained. Custom arrangements of these sources are available.

Four (4) Cesium Dummy Sources Arranged in a Plastic Tube

Dummy Sources (Cesium)

Part # 513-2

Instead of total length of 20 mm, active length of 14 mm also could be used for loading in plastic tube. Custom arrangements of these are available.

Also Available:

513	Cesium Dummy Sources for 3M Sources
696	Cesium Dummy Sources for Amersham Sources

Other Custom Loadings Available

Brain Implant Kit

Part # 289-1; Sterile Kit Part # 1502

The Brain Implant Kit consists of an outer catheter made of celcon and an inner catheter made of nylon with a nylon filament. The outer catheter has a standard length of 25 cm (other lengths available) with a special obturator and flexible button, closed smoothly on one end. The O.D. of the outer catheter is approximately 0.080" and the I.D. is 0.057". The inner catheter has a standard length of 26 cm (other lengths available) with O.D. of approximately 0.052" and I.D. of 0.038". It is designed for use with standard Iridium-192 and Iodine-125 sources. The filament can be used as spacers and can be heat sealed. The buttons can be positioned along the outer catheter using the appropriate glue. They have suture holes and the stem can be crimped or heat sealed. Each kit is supplied with 3 buttons: flexible large, flexible small, and stainless steel.

Prostate Stabilization Set Needles

Part

10207

18 Gauge x 20 cm
Sterile; Box of 10 Sets;
2 Needles per Set

Improved Seed Distribution by Means of Prostate Gland Immobilization

Prostate Stabilization Set

The Stabilizing Needle (patented) is designed to prevent prostate movement during the insertion of prostate seeding needles. Immobilization is accomplished by deployment of a "side barb" in the prostate tissue and then securing a "lock spring" against the proximal side of the template. Two stabilizing needles must be used to adequately stabilize the prostate gland.

Features

- Two-part hub design
- Locking side barb
- Sharp bevel-point needle tip
- Echogenic tip
- 10 Pouches with 2 needles

Packaged:

18 Gauge x 20 cm sterile; box of 10 sets; 2 needles per set

Anderson Forell Suthanthiran Nylon Dummy Ribbon Set

Part # 5006-0003

Set Contains:

One Ribbon with 12 Seeds each of 1.2 mm Length

One Ribbon with 12 Seeds each of 1.8 mm Length

One Ribbon with 12 Seeds each of 2.4 mm Length

One Ribbon with 12 Seeds each of 3.0 mm Length

One Ribbon with 12 Seeds each of 4.0 mm Length

This enables identification of ribbons in complex implants, facilitates implant radiography and improves localization accuracy. Dr. Lowell L. Anderson of Memorial Sloan-Kettering Cancer Center and Mr. Bruce Forell of City of Hope Medical Center have been very instrumental in bringing about this design concept.

Nylon Dummy Ribbon

Part # 220

The diameter of the Nylon Dummy Ribbon and High Density Seed are 0.85 mm and 0.5 mm respectively. Nylon Dummy Ribbons are also available with seed lengths of 0.6 mm, 1.2 mm, 1.8 mm, 2.4 mm, 3.0 mm, 4.0 mm and 5.0 mm.

Cable Dummy Ribbon

Part # 423/HDR Part # 530

Cable Dummy Ribbons are similar to the Nylon Dummy Ribbons. The diameters of the cable and the dummy seeds are 0.5 mm and 0.85 mm respectively. Custom made Cable Dummy Ribbons are available with or without alternate markers using seed lengths of 0.6 mm, 1.2 mm, 1.8 mm, 2.4 mm and 3.0 mm.

Flexi-Needles

Flexi-Needles

Description

Flexi-Needles are sharp or blunt, with closed-ended needle guides, and have a nominal 0.3 cm long tip. They are made of biologically compatible material. (Custom lengths are available upon request.)

Intended Use

Flexi-Needles are inserted transcutaneously, using special obturators. They are designed to be afterloaded with Iridium-192 or Iodine-125 ribbon sources. Two types of caps are available (Luer Cap or Slip Cap) to place over the loaded Flexi-Needle to hold the ribbons in place during irradiation. Simulator sources can be used for localization; obturators are left in place until the time each is afterloaded with the appropriate radioactive source.

PRECAUTIONS

CAUTION: Device is shipped Non-Sterile or Sterile.

CAUTION: Flexi-Needles and Obturators are for single use only.

CAUTION: Federal law restricts this device to sale by or on the order of a physician.

CAUTION: Ensure Obturator is all the way to the tip of the Flexi-Needle prior to insertion.

CAUTION: Luer hubs may separate from the Flexi-Needle and Obturators if excessive force is applied.

WARNING: Obturators are made of Tungsten or Stainless Steel. Both obturator and Flexi-Needle may break if bone, hard skin, hard surfaces, or excessive forces are encountered.

Rectal Marker Kit with Anus Marker

Part # 222-1; 222-2 (see below)

The Rectal Marker is a device generally used with localization fields on intracavitary (intrauterine-vaginal) applications or bladder external beam localizations.

With the old method of using a soldering or other type wire, one could only obtain the position of the rectum. But, with the Rectal Marker, it is now possible to obtain both position of rectum and magnification, which allows you to determine accurately the rectal distance from the radiation source.

Also Available:

Disposable Rubber Sleeves for this product: Part # 1072-0009.

Part #	Rectal Marker is available with
222-1	Stainless Steel Ball
222-2	Tungsten Ball
960-1	Sterile Stainless Steel
960-2	Sterile Tungsten

CAUTION: This product should be carefully inspected by your staff prior to clinical use and should be used by authorized personnel only.

Anderson Marker Kit

Part # 1074-0002

Kit contains a 25 cm long implanter (designed to limit implantation to 1 cm) and stylet.

Adjustable Marker Kit

Part # 1074-0011

Kit contains a 20 cm long implanter with adjustable stop, stylet, one spare needle and one Allen wrench.

Stainless Steel Markers

Part #

179-1

Markers are sold separately. The markers are easily identified on visualization films and also aid in treatment planning.

NOTE: Gold Markers (Part # 351) are also available to use with Anderson Marker Kit or Adjustable Marker Kit.

CAUTION: This product should be carefully inspected by your staff prior to clinical use and should be used by authorized personnel only.

Iridium-192	
Part # 118	
Ir-192 Seeds in Nylon Ribbons	
Range of Activity	0.1 to 10 mg Raeq per Seed
Seed Dimension	3.0 mm Long and 0.5 mm Diameter
Emission Energy	0.37 MeV (average) Gamma Energy
0.1 mm Diameter	Core of 30% Ir & 70% Pt Surrounded by 0.2 mm Thick Stainless Steel Wall
Physical Characteristics	1. Half-life 74.3 Days 2. HVL (50% attenuation) About 3 mm Lead 3. Specific Gamma Ray Constant 4.6 R cm ² /mCi/hr
Custom Spacing Available.	
Gold-198	
Part # 557	
Au-198	
Range of Activity	0.1 to 10 mCi per Seed (4.7 mCi of Gold-198 is Equal to 1 mCi of Radon)
Seed Dimension	2.5 mm long and 0.8 mm Diameter
Emission Energy	420 keV (average) Gamma Rays
Construction	Metallic Gold Pellet Encapsulated in Platinum
Physical Characteristics	1. Half-life 2.7 days 2. HVL (50% attenuation) About 4 mm Lead 3. Specific Gamma Ray Constant 2.35 R cm ² /mCi/hr
Custom Activities Available.	

- We are the only one to provide comparative calibration data traceable to NIST, Washington, DC, University of Wisconsin, K&S Associates, and M.D. Anderson Hospital, Houston, TX, for the past 15 years — which indicates excellent quality control.
- We are the only supplier of LDR Iridium-192 and Gold-198 seeds.
- We are the only provider of Iridium-192 in nylon ribbons in a wide range of activities.
- We are the only one to provide custom services for Gold-198 permanent implants, as well as a wide range of activities.
- We are the first and only one to call our customers the morning after shipping to inform them of mode of transportation and expected arrival time.

Curved Needles

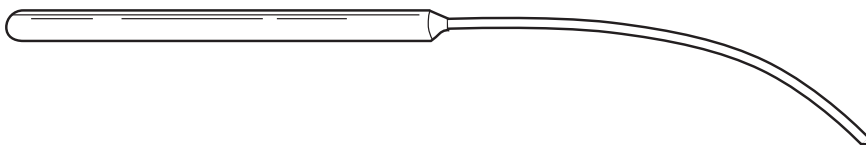

These are curved Stainless Steel Implant Needles with handle. The outer diameter (O.D.) is 0.095" and the inner diameter (I.D.) is 0.077". Two sizes are available: short and long. The short needle has a length of 3.5" and the long needle measures 7.25". Each handle is 4" long.

Also available: Thin wall curved short needles

Part # 5004-0002-Long

Part # 5004-0001-Short

CAUTION: This product should be carefully inspected by your staff prior to clinical use and should be used by authorized personnel only.

Template Needles with Funnel and Cap

This 20 cm needle is specifically designed for use with Syed/Neblett templates or disposable templates. A funnel fixed to one end makes the ribbon loading easy and less time consuming. A special cap fits over the funnel to keep the ribbon in position.

Custom length is available upon request.

Caps are for one time use only.

CAUTION: This product should be carefully inspected by your staff prior to clinical use and should be used by authorized personnel only.

Diddler-Needle Adjustment Tool

Part # 5002-0010

Use the DIDDLER, Not Your Fingers!

The DIDDLER is a device to adjust the position of transperineal prostate seeding needles during the time of seed implantation. Often, fingers are needed to reach behind the transperineal template to readjust the needle position. The DIDDLER replaces the need to use fingers which, in most cases, are too big to reach a needle between the template and perineum.

The DIDDLER, similar in construction to a crochet needle, is made entirely of stainless steel and consists of a long hexagonally shaped handle with a slender tip. The tip thus allows a needle to be pushed, pulled or twisted left and right even if there is a needle right next to it.

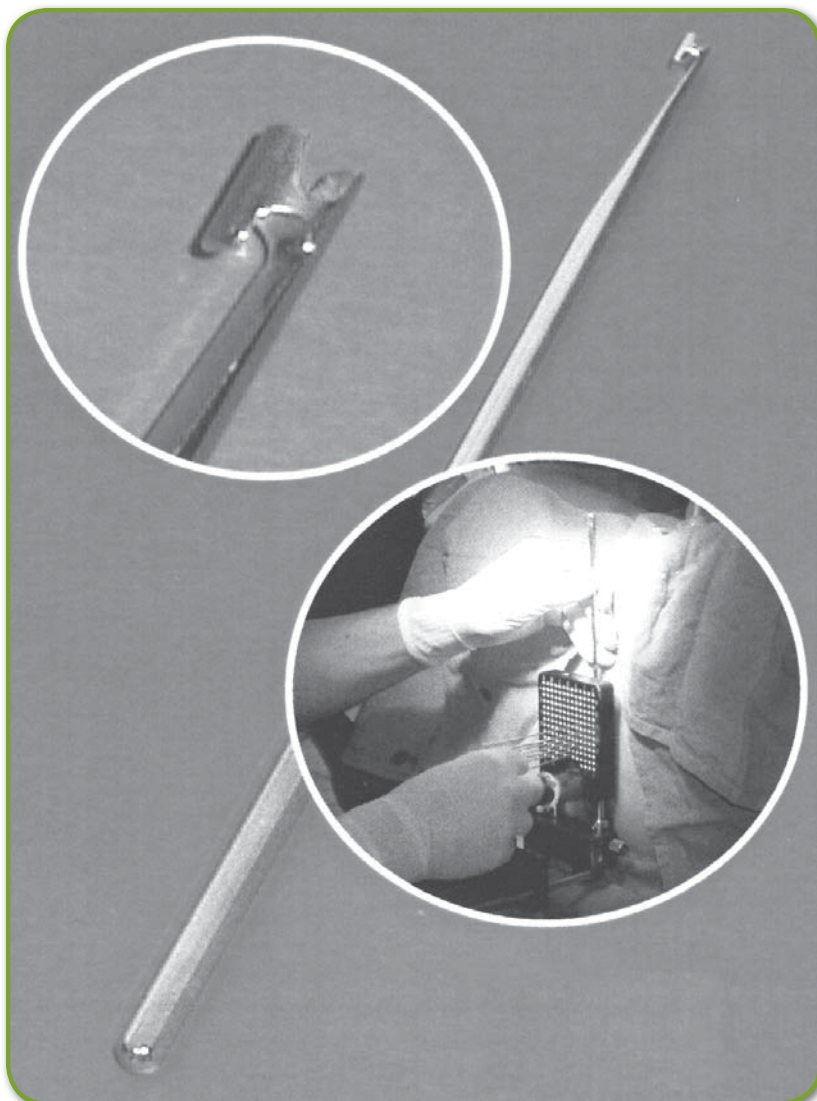

Adjust the needle up, down and sideways without using your fingers!

Radiation Protection

The DIDDLER is especially effective when needle repositioning with "HOT" Pre-loaded Prostate Seeding Needles is required. Notably, the DIDDLER is most useful in the Mick technique when numerous needles are implanted either peripherally, in rows, or all at once.

The DIDDLER is approximately 8" (20 cm) long and made entirely of stainless steel. A high-polish finish provides for easy cleaning and flash sterilization.

The DIDDLER can be AUTOCLAVED!

Specifications:

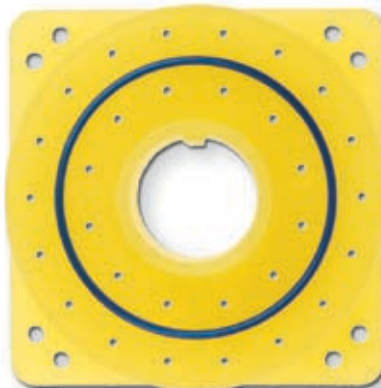

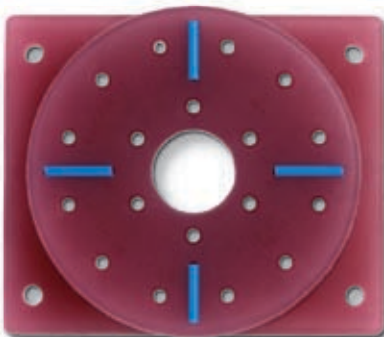

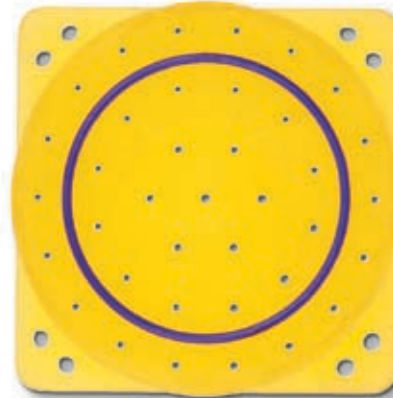

Material	Stainless Steel
Length	8" (20 cm approximately)
Size	(6.4 mm diameter) Hexagonal Stock

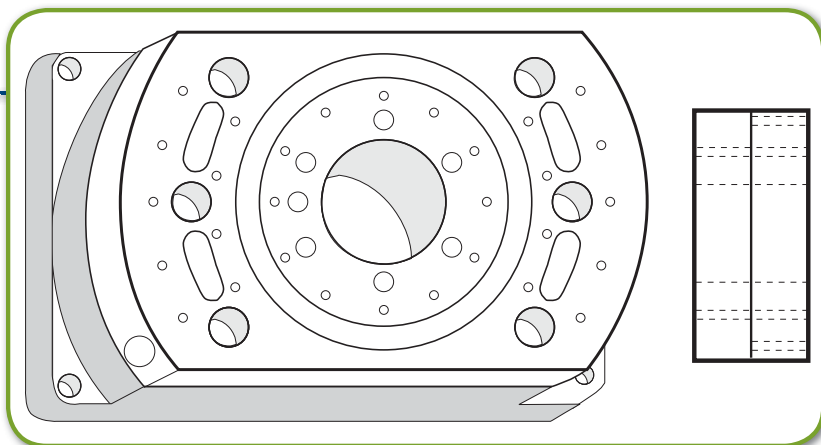

CAUTION: This product should be carefully inspected by your staff prior to clinical use and should be used by authorized personnel only.
